

METHOD AND SYSTEM FOR MANAGING  
PUSHED DATA AT A MOBILE UNIT

ABSTRACT OF THE DISCLOSURE

A method and system for managing pushed data at a  
5 mobile unit include the capability to receive an out-of-  
band message at a mobile unit and analyze the message to  
determine if it contains pushed data. The method and  
system also include the capability to determine, if the  
message contains pushed data, whether the data is  
10 appropriate for a session currently being hosted by the  
mobile unit. The method and system further include the  
capability to post the data to the session if the data is  
appropriate for the session.
